INTRODUCTION

President of the Republic of Uzbekistan Shavkat Mirziyoyev Uzbekistan is always faithful to its traditions in the field of inter-ethnic harmony and religious tolerance, and never deviates from this path. Today, we believe in our multi-ethnic people, our youth, who are our hope and support, and we are reaching the finish line. The happiness of our dear children and grandchildren, thinking about perfection, looking forward to the bright future of our country, our people, we are setting ourselves huge tasks. He emphasizes that a great nation's work will be great, its life will be bright and its future will be prosperous. Today, raising a spiritually mature and perfect person has been raised to the level of state policy. The restoration of the national spirituality of our people, the extensive study of our rich historical heritage, the preservation and enrichment of our national traditions. Also, comprehensive development of culture and art, science, education is a special profession. It is the main thing to raise an independent thinking, free, educated, in a word, well-rounded person through education set as a goal. National values are very important in the process of spiritual education. National values are the most effective tool of education. Using it wisely, forming the feelings of patriotism, honesty, and patriotism in the minds of our children is the demand of today.

One of our important achievements in the current period is when we achieved the primacy of national and spiritual values in education. This is to teach the young generation a rich historical, national, spiritual heritage and for centuries means education based on established traditions. Because as Abdulla Awlani said: "Education is a matter of life or death for us, or salvation or destruction, or happiness or disaster."

It is very important to be able to correctly interpret the events taking place in the process of globalization, to analyze each reality based on our national interests and values. For this, the national idea and our ideology should be strong. After all, the national idea instilled in the minds and thinking of our people, especially the young generation, not only ensures not to be influenced by any foreign ideas, but also forms the ability to respond appropriately to them, to respect and preserve our national values. encourages.

Society cannot achieve its future without developing and strengthening moral values in the minds of young people. Training of a new generation of personnel capable of solving complex and large-scale tasks in the way of modernizing our country and building a modern society from now on, it will remain the most important direction of our activity. Only when the people or the nation has the right to determine its own destiny, can it freely determine its independent development path, educate the youth on the basis of their national values can be trained.

In the period of development of independent Uzbekistan from a strong state to a strong society, using our age-old spiritual heritage, national values, and the historical experiences of our great ancestors, learning from their exemplary work will help to realize the tasks of building a civil society in our country, and contribute to the spiritual growth of our people. serves.

In society, the problems of youth education have always been one of the top topics of the day. At the same time, the process of globalization is accelerating in the world. Mutual relations between the peoples and countries of the world are increasing.

Uzbekistan is no exception. The values characteristic of different peoples affect the life of the youth of Uzbekistan. Such environment with international information system, internet, mass media, advertising, various movie shows related works have an impact on the spiritual life of young people and create conditions for the entry of various values.

Young people should know well which aspects of it to use or not to use. It is important to distinguish values from each other, to treat them without losing national values.

National in social life, in the behavior of some young people it is possible to observe situations that do not correspond to our values. It is possible to observe cases of incompatibility between the actions of some young people who support the ideas of religious extremism and fanaticism and our national values. Most of our young people have formed the right attitude towards national and universal values. Today, the attempt to educate young people against national values is increasing in the world information space. Such actions make young people proud of their people, country and nation is aimed at educating in a spirit of indifference to values, with the hidden goals of instilling in them a tendency to more western values will be incarnated.

The goal of strengthening national-spiritual values in the worldview of young people is not to teach them to live based on their own values, but also to master these universal values and become the country's leader.

It is an invitation to live and work taking into account the fact that one's own development depends on it. In addition, in-depth knowledge of national and spiritual values has a positive effect on preservation, protection and strengthening of independence by young people.

The Uzbek people have customs, traditions, pictures and rituals that can be instructive, especially in the education of young people, and today, instilling these in the minds of children in the family, in the daily life style of young people, is under the influence of spiritual threats is one of our important tasks in preventing the stay.

National-spiritual values have a great educational power in the education of the young

generation. Loyalty to them ensures our uniqueness on the world scale as a national unity. Our language, customs, traditions and traditions are not just a legacy of the past, but a condition for realizing our identity.
